Treasure of Golden Mountains Exhibition of Shuijinjiou Geoheritage

Date 03/08-09/29

Venue Jinshuei Special Exhibition Hall, Gold Refining Building

The epithermal deposits of Jinguashi, Jiufen and Wudan Mountain region contain the richest mineral resources in Taiwan. The diversity of minerals deposited there makes the area one of the best outdoor classroom for Taiwanese geological science.

The Gold Museum organizes the program for the specific purpose of bringing knowledge and understanding of the historic landscape detailing Taiwanese gold and copper mining industry, and the island's rich natural resource, to the people. The show, apart from introducing the geological structure of the Shuijinjiou area, also showcases the unique and precious mineral resources of the region. The program also includes scientific studies and the relationship between goldmining and humanistic development, and how the correlation became the foundational “root” for the past development of this mountainous mining town.

This is a mineral exhibition not to be missed, as it will include many rare specimens in the collection. As part of the exhibition are four education programs, which will guide the participants through a series of fieldwork and hands-on activities, and to further unveil the secrets of the underground golden palace.
